***OptiMSMTM[™] is a registered trademark of Cardinal Nutrition, the original licensee under the R.J. Herschler patents*

Product Overview

"If you don't use it, you lose it." These words are very true when it comes to using your body – staying active is a vital part of a healthy lifestyle. However, as the human body grows older, activity can also be a double-edged sword, gradually "wearing away" the protective, cushioning cartilage in your joints. FlexCaps contains vital nutrients that are found naturally in joint tissue, helping to support flexible, comfortable joint movement throughout your life.

Healthy Highlights

- Manufactured by your body (but decreasing as you age), glucosamine is a naturally-occurring substance that stimulates the key components that help build cartilage. FlexCaps contains stabilized glucosamine sulfate, the best source of glucosamine, providing a replenishing source of this vital joint compound.
- FlexCaps contains the important natural sulfur compound, methylsulfonylmethane (MSM), which researchers have found to contribute to healthy joint function.
- Bromelain (from pineapple), and the herbs Curcuma longa and Boswellia serrata have been added to FlexCaps for their anti-inflammatory properties, helping to decrease the painful cartilage-damaging effects of inflammation.

As Part of Your Plan

If you are experiencing aching, stiff joints due to aging, athletics, or injuries, FlexCaps will be an extremely effective addition to your total daily health plan.

Recommended Usage

Adults take 3 capsules daily with meals in divided doses or as directed by a healthcare provider.
